SAFETY INSTRUCTIONS

Whenever you use an electrical appliance, you must take some basic safety precautions, including the following:

1. Read through all the instructions carefully before you start.
2. To avoid the risk of an electric shock, never immerse your appliance in water or any other liquid.
3. This appliance can be used by persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge, providing they are given supervision or have received full instructions regarding the use of the appliance in a safe way and if they understand the hazards involved.
4. Children should not play with or use the appliance. Keep the appliance and its cord out of reach from children.
5. Only for citrus press use: this appliance can be used by children aged 8 years and above, if they have been given supervision or instruction regarding the use of the appliance in a safe way and if they understand the hazards involved. Cleaning and user maintenance should not be done by children unless they are aged 8 years and above and are supervised. Keep the appliance and its cord out of reach of children under 8 years old.
6. If the power cord has been damaged, it must be replaced by the manufacturer, a Magimix approved after-sales service agent or a similarly qualified person, in order to avoid all risks. If the supply cord is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.
7. Always unplug your appliance if you are leaving it unattended, before cleaning it or fitting or removing parts. Switch off the appliance and disconnect from supply before changing accessories or approaching parts that move in use.
8. Before plugging your appliance in, always check that the voltage indicated on the serial plate on the bottom of your appliance corresponds to the voltage of your mains supply.
9. Models with a chrome finish must always be connected to a grounding outlet with their original power cord.
10. Never allow the power cord to dangle over the edge of your worktop or counter, and ensure it never comes into contact with hot surfaces.
11. Be careful if hot liquid is poured into the food processor as it can be ejected out of the appliance due to a sudden steaming.
12. To prevent a serious injury and avoid damaging your appliance, never insert your hands - or a utensil - in the feed tube whilst the disc, blades or juicing attachments are moving.
13. The spatula should only be used when the appliance is not running.
14. Never put the processor bowls in your microwave oven.
15. Care shall be taken when handling the sharp cutting blades, emptying the bowl and during cleaning.
SAFETY INSTRUCTIONS

16. To avoid all risk of injury, never install the metal blades or discs on the motor shaft unless the bowl has been locked into position first.

17. The blades are all extremely sharp: never use the slicing disc until all the parts have been properly assembled.

18. Do not use your appliance if the rotating sieve or protective cover is damaged or has visible cracks.

19. Your appliance is equipped with a thermal protection that automatically switches the motor off if it has been running for too long or is overloaded. If this happens, turn your machine off and wait for it to cool down completely before switching it back on again.

21. Check that the lid is correctly locked into position before switching your appliance on.

22. Never attempt to override the safety mechanisms.

23. Press the STOP button and wait for all the moving parts to come to a standstill before removing the lid.

24. Never use your appliance outside.

25. This appliance is intended solely for domestic use.

26. The following are not covered by the warranty: use in kitchen areas reserved for staff in shops, offices and other workplace environments, on farms, by the patrons of hotels, motels and other commercial environments of a residential nature, and in bed and breakfast-type environments.

*Depending on the model

(1) For greater stability, thread the power cord through the notches on the underside of the motor unit.
**STOP** : press this button to switch your food processor off.

**AUTO** : press this button to process in a continuous mode and obtain a more even texture. Ideal for fine chopping, mixing or blending, as well as for kneading, beating egg whites, slicing or grating.

**PULSE** : press this button for intermittent processing. Your food processor automatically switches itself off as soon as you release this button, giving you complete control over the task from start to finish. Ideal for coarse chopping or mixing.

To achieve a smoother consistency when preparing soups and purées, start off using the pulse button, then switch to continuous mode (AUTO).

1 pulse = keep the PULSE button pressed down for 1-2 seconds and release.

⚠️ Never unlock the lid without pressing the STOP button first. Your food processor is fitted with a thermal failsafe that automatically switches the motor off if it is overloaded or has been running for too long. If this happens, press the STOP button and wait until your appliance has cooled down completely before switching it on again.

⚠️ Total weight amounts calculated for the main bowl.
Wash all the parts thoroughly (except the motor unit) before using for the first time.

1. Place the main bowl on the motor unit and turn in an anticlockwise direction to lock into place.
2. Slide the midi bowl onto the motor shaft, inside the main bowl.
3. Slide the mini bowl onto the motor shaft.
4. Fit the mini blade onto the motor shaft inside the mini bowl.
5. Place the lid on top of the main bowl and turn in an anticlockwise direction until it locks into place.

**WARNING**

- Triple protection: your appliance will only work if both the bowl and lid are correctly locked into place, and if the bottom of the pusher is level with the MAX level indicator (p.15).
- Do not leave the lid in the locked position when the machine is not in use.
**REMOVING THE FOOD PROCESSING BOWLS**

1. Unlock the lid by turning clockwise and lifting it off.
2. Remove the blade from the mini bowl.
3. Lift the mini bowl out.
4. Lift the midi bowl out, holding it by the rim.
5. Release the main bowl by turning it clockwise. You can now lift it off to remove it.

**WARNING**

- Always handle the discs and metal blades with caution, as they are extremely sharp.
- Never unlock the lid unless you have pressed the STOP button first. If the bowl will not move, check that the lid has been unlocked.
MINI BOWL: equipped with the mini blade for blending, chopping, mixing and emulsifying small amounts. Only use the mini blade in the mini bowl.

MAIN BLADE: used in the main bowl for mincing, blending, emulsifying, chopping. *Blender Mix*: designed to ensure a smoother, creamier finish when blending soups and other liquids.

DISCS: used in the midi bowl for grating or slicing fruit, vegetables or cheese in two different thicknesses (2mm and 4mm)*

MIDI BOWL*: a practical, easy-clean bowl specially designed for use with the discs.

DOUGH BLADE: used in the main bowl for mixing and kneading leavened or unleavened dough.

WHISK: used in the main bowl to whip cream or beat egg whites for meringues, mousses, soufflés, etc.

*Depending on the model"
MAIN BLADE AND BLENDERMIX

MAIN BLADE

1. Place the Main blade on the motor shaft. Make sure it is at the bottom of the bowl.

2. Fit the Main blade on the motor shaft. Put the ingredients in the bowl. Slot the BLENDERMIX in the bowl. Turn the lid until it locks into position.

BLENDERMIX

1. Place the Main blade on the motor shaft. Make sure it is at the bottom of the bowl.

2. Fit the Main blade on the motor shaft. Put the ingredients in the bowl. Slot the BLENDERMIX in the bowl. Turn the lid until it locks into position.

The BLENDERMIX attachment should only be used with the Main blade.

The Main blade is extremely sharp. Always hold it by the central hub. When emptying the bowl, either remove the Main blade first or hold it in place by placing a finger on the central hub.
DOUGH BLADE

MIXES and KNEADS leavened dough for bread, brioche, etc.

MIXES and KNEADS unleavened dough for shortcrust pastry, rich shortcrust pastry, etc.

Depending on the quantity, it usually takes approx. 30 seconds to knead a batch of dough. Place all ingredients in the bowl and lock the lid in place before you switch your appliance on.

Fit the dough blade on the motor shaft. Make sure it is at the bottom of the bowl.

Place all the ingredients in the bowl. Put the lid on and turn anticlockwise until it locks into position.

Press AUTO. Switch off as soon as the dough forms a ball or the mixture is sufficiently kneaded.

The dough blade can also be used to stir chocolate chips, dried fruit, etc., into the dough without chopping them. Simply pulse 2 or 3 times.

Never exceed the quantities recommended on p.6. Check out our useful hints and tips on p.21. Use the spatula to scrape any remaining flour off the sides of the bowl.
WHISK

Your bowl must be clean and dry. To allow enough air in, remove the double pusher from the lid.

**WHISKS egg whites**

Put the egg whites in the bowl. Whisk continuously for 5-8 minutes, depending on the number of egg whites.

**WHIPS cream**

Before you begin, chill the bowl and ingredients in the fridge for an hour. Pour the whipping or double cream into the bowl. Whisk continuously, keeping a close eye on the cream so that it does not turn into butter.

Put the lid on and turn anticlockwise until it locks into place.

Make sure you fit the four sections together correctly. Check that the metal shaft has been correctly inserted. It should protrude slightly from the top.

Slot the egg whisk onto the motor shaft. Ensuring it is at the bottom of the bowl. Add the ingredients.

When whisking egg whites or whipping cream, remove the double pusher from the feed tube to allow more air in.

Check out our useful hints and tips on p.23.

Built to an exclusive, patented Magimix design, the whisk beats the egg whites very gradually, making them stiffer and giving them more volume.
We recommend you use the discs in the midi bowl, but they can also be used in main bowl.

1. Lower the midi bowl into the main bowl. Slide the disc support onto the motor shaft.

2. Position your chosen disc so that the relevant function and thickness code is uppermost.

3. Slicing/grating discs: each disc is engraved with a code, e.g. R/G4: 4mm grater E/S2: 2mm slicer

4. Slot the disc onto the disc support. Turn it anticlockwise until it drops into place (a two-stage process).

5. For nonreversible discs*, make sure you put them the right way up. The central plastic part should be pointing downwards.

**WARNING**
- Always handle the discs with caution, as the blades are extremely sharp.
- Never insert a foreign object - or your fingers - into the feed tube. Always use the pusher designed for that purpose.
- Never exceed the recommended quantities (p. 6).

*Depending on the model

After grating or slicing, you will be left with tiny stubs of fruit or vegetables on your discs. This is entirely normal and ensures a flawless end result.
A) XL MODELS

The 3-in-1 feed tube comprises:
1) a large feed tube for round or bulky fruit and vegetables.
2) a small feed tube for small or long fruit and vegetables.
3) a narrow feed tube, ideal for long, thin vegetables i.e. carrots.

Large feed tube: fruit or vegetables for slicing can be left whole.

Small feed tube: when grating fruit or vegetables, stack them horizontally for longer shreds.

B) NON-XL MODELS

You may need to cut large fruit or vegetables (e.g. apples, tomatoes) in half.

Check out our useful hints and tips on p.22.
After grating or slicing, you will be left with tiny stubs of fruit or vegetables on your discs. This is entirely normal and ensures a flawless end result.
The accessories you find in the box will vary depending on the model. The average time to process 1 kg of fruit or vegetables is approx. 1 minute.

**CREATIVE DISC KIT:** 3 discs for 3 creative cuts: fluted, julienne and extra-wide julienne.

**DICING KIT (XL MODELS ONLY):** as well as dicing fruit and vegetables, you can also cut them into sticks or fries.

**OPTIONAL DISCS**

- 6mm grater
- 6mm slicer
- Parmesan
- Extra-wide julienne
- Wide julienne
- Fluted
- Julienne

**CITRUS PRESS:** with a lever arm and 2 cones, yielding juice with no pips and just the right amount of pulp.

**MASH & PUREE KIT:** for natural vegetable purées and fruit compotes.

**JUICER AND SMOOTHIE MIX:** ideal for making juices, cocktails, smoothies, nectars and coulis.

**SPIRAL EXPERT:** perfect for transforming fruit and vegetables into deliciously healthy spaghetti, tagliatelle or fusilli.
USING THE CITRUS PRESS

1. Slot the citrus press basket onto the bowl and turn it anticlockwise until it locks into position.

2. Select the right cone for the size of your citrus fruit. The larger cone should always be clipped onto the smaller one.

3. Slide the cone onto the motor shaft. Position the lever arm opposite the locking system and clip the tab to the base of the basket.

4. Position the halved fruit on the cone, pressing down gently.

5. Lower the lever arm, switch your processor on, and apply gentle pressure to the arm until all the juice has been extracted.

6. Switch your appliance off before raising the lever arm, to avoid splashing.

When juicing grapefruit, release the pressure very slightly from time to time, to extract the maximum amount of juice.

Check out our useful hints and tips on p.23.
Always unplug your appliance before you clean it. Always clean it immediately after use (using water and washing up liquid).

**ACCESSORIES:** use a bottle brush to clean inside the accessories.

**MOTOR UNIT:** wipe with a soft, damp cloth.

To preserve the appearance of the detachable parts and make them last as long as possible, make sure you follow these recommendations:

- **Dishwasher:** select the minimum temperature (< 40 °C) and avoid the drying cycle (generally > 60 °C).
- **Washing by hand:** do not leave the parts immersed in detergent for too long. Avoid abrasive products (e.g. stainless-steel scrubbers).
- **Detergents:** read the manufacturer’s instructions to check their compatibility with plastic items.

Never leave parts to soak. Dry them straight after washing.

Make sure you dry the stainless steel parts thoroughly to avoid oxidizing stains. These are purely aesthetic and do not affect the quality of the blades, discs or bowls.

Some food such as carrots tend to stain plastic. Rubbing with a piece of kitchen paper and a little vegetable oil will remove most of this staining.

Please rinse your bowl and your lid immediately after using citrus fruits (lemons, oranges, grapefruit etc.)

**Warning:** always handle the blades and discs with caution, as they are extremely sharp.

Never immerse the motor unit in water.

Hints & Tips

Golden rules
USEFUL HINTS & TIPS

SIMPLE
- **AUTO** button: the motor automatically adjusts its speed to the task at hand.
- **PULSE** button: for more control over the end result.
  This is the setting you need for precision chopping or blending.
- Place soft foods (e.g. meat, fish or soft cheese) into the freezer for a few minutes to firm
  them up before chopping, grating or slicing them in your food processor.
  **NB**: they should be firm, not frozen!

PRACTICAL
- To use your food processor efficiently, make use of the different
  bowls for different tasks, starting with the mini bowl, then
  midi bowl and lastly the main bowl.
  Always start with the hard or dry ingredients and end with the liquid
  ones.
- If your appliance starts to vibrate, carefully wash and dry the feet,
  and check that you have not exceeded the maximum capacities
  shown on p.6.

![XL LID](image)

- The middle or medium feed tube is ideal for:
  - slicing long fruit or vegetables (e.g. cucumbers, carrots, leeks).
    Stand the fruit and vegetables upright and close together.
  - slicing small fruit or vegetables (e.g. strawberries, kiwi fruit, turnips).
    Place them into the small feed tube one at a time.
  - grating long fruit or vegetables (e.g. carrots, courgettes) or pieces of cheese.
    Stack them horizontally in the small feed tube.
- The large feed tube is ideal for:
  - slicing round fruit or vegetables (e.g. oranges, pineapples, apples, pears, mangoes,
    tomatoes, potatoes).
    Either cut them into large pieces before introducing them into the feed tube, or leave
    them whole.
    Do not fill it beyond the MAX level indicator, otherwise your food processor will not
    start.

![MINI BOWL](image)

- The mini bowl is ideal for processing small amounts. Use it to chop onions or herbs, mince
  meat, or create dips, salad dressings and mayonnaise.
- Before chopping fresh herbs, check that both the herbs and the bowl are perfectly clean
  and dry. This will ensure you get the very best results. The herbs will also keep
  for longer.
USEFUL HINTS & TIPS

MIDI BOWL AND DISCS

- The midi bowl is ideal for grating and slicing fruit, vegetables and cheese. Cabbage: roll the leaves one inside the other after discarding the tough core and slice.
- Some food items, such as carrots, tend to stain plastic. Rubbing the part with a piece of kitchen paper and a little vegetable oil will remove most of the staining.

MAIN BOWL

- **Liquid ingredients**: never fill the bowl more than a third full.
- **Solid ingredients**: never fill the bowl more than two-thirds full.

MAIN BLADE

- **When processing large amounts** of meat or vegetables, cut the food into 2cm pieces.
- If your are chopping **meat or fish**, use the PULSE button to control the end result.
- For **vegetable purées**, cut the cooked vegetables into large pieces before putting them in the bowl with the Main blade. Use the PULSE button first, then switch to continuous mode (AUTO) until the purée reaches the desired consistency.

BLENDERMIX

- **Soups, pancake batters, cocktails**: the Main blade goes in the bowl first, followed by all the ingredients, then the BlenderMix. Your processor is now ready to run.

The BlenderMix attachment gives a smooth velouté finish.
**DOUGH BLADE**

- **Soft dough (brioche, choux pastry, etc.):** Magimix food processors work on the rapid kneading principle. Doughs are kneaded for approximately 30 seconds, the precise time depending on the amount and type of dough. Follow the instructions carefully for each recipe.

- **Normal dough:** for faster results, leave the dough to rise or prove at (or slightly above) room temperature. As flour is very light, you may sometimes notice a cloud of flour escaping from the bowl. To avoid this happening, put all the non-liquid ingredients (salt, flour, butter, eggs, etc.) in the bowl before adding the liquid ingredients (water, milk, etc.). Only then switch your food processor on.

- You can store dough in the freezer for up to 2 months, providing you wrap it carefully in cling film. Remember to take it out the day before you intend to use it.

**EGG WHISK**

- Ensure your bowl is clean and dry.
- Remember to remove the double pusher from the lid to let in enough air.
- **Egg whites:** for fluffier egg whites, use eggs that are at room temperature.
- **Whipped cream:** do not use fat-free or low-fat cream, as it will not whip. Make sure the full-fat whipping or double cream you use is chilled. Place the food processor bowl in the freezer for 10 minutes beforehand. Keep a close eye on the cream while it is being whipped, to avoid over processing and it turning into butter.

**CITRUS PRESS**

- There are 2 cones: a small one for lemons and limes, and a large one for oranges and grapefruits. The small cone is stored inside the large cone.
To get the very best out of our recipes, follow these few simple golden rules:

1. **Always use the very best ingredients**

Choose good-quality, fresh ingredients.

The fresher your fruit and vegetables, the more vitamins they will contain. Signs of freshness include smooth skin, green leaves and no bruising.

Always use fresh meat and fish.

Pay attention to the type of flour indicated in the recipe. The choice of flour is very important, not least because the amount of water you need depends on the kind you use, bread flour can absorb water at different rates. For flour water ratios, refer to the recipe measurements on the flour packet.

Plain flour, a very fine, white, all-purpose flour that is best for making cakes, pastries, sauces and pancake batters.

Self-raising flour has low gluten content and contains a raising agent, usually baking powder. It’s used in baking and cake-making.

Strong white flour has a higher gluten content and is therefore ideal for making bread and brioche.

It is better to use caster sugar, rather than granulated sugar, which has coarser crystals. Icing sugar is very fine and is commonly used for cake decoration.

Always use butter, never margarine or a low-fat spread.

Yeast comes in two forms – fresh or dried. In our recipes, we have chosen to use fresh yeast, which you can get from your local baker, as well as from specialist shops (or the bakery section of your nearest supermarket). If you use dried yeast, remember to use half the amount indicated for fresh yeast.

For the very best results, always dissolve the fresh yeast in a liquid heated to 35 °C. Yeast is a living organism, and if the liquid is any hotter, it will kill it.

Salt regulates the rising action of the yeast and reinforces the structure of the gluten.

It is best to use pasteurised whole milk.

Double cream has a minimum fat content of 48% (35% for whipping cream), compared with 15% for single cream and even less for “light” versions. It not only tastes better, but holds air bubbles better when whipped.
Eggs are sold in four different sizes, with medium eggs weighing 53-63g. For recipes where the egg whites are to be beaten, bring them up to room temperature first. Eggs must be fresh if they are to be eaten raw in mousses, etc. If you are using them for home baking (e.g. meringues, macaroons), it is a good idea to separate them 2-3 days beforehand, storing the yolks and whites in separate airtight containers in the fridge. For egg whites to whisk properly, your bowl must be clean, with no traces of fat.

2. Be prepared

The following pieces of equipment always come in useful:

Measurement instruments: Accurate digital kitchen scales (range: from 2g to 2kg) is vital, as is a cooking thermometer that can measure temperatures of up to 200 °C.

Baking tins: it is important to use a baking tin of the right shape, the right quality and made from the right material. We specify which kind of tin is required for each recipe.

Cake making accessories: cutters of different sizes, to vary the presentation of cakes and pastries.

A piping bag is vital for filling cream puffs and eclairs, as well as making meringues or macaroons.

You will need a rolling pin for rolling your pastry out and a brush for buttering your tins and painting egg wash on your bread and brioche.

3. Precision

In some recipes, especially those for bread and cakes, the instructions must be followed to the letter. Always weigh or measure the ingredients out carefully and respect the kneading, resting and baking times.

4. Cooking - the grand finale

How well do you know your oven? The success of your recipe may well depend on it, as the temperatures and cooking times in our recipes are merely there to guide you.

These times may vary according to your oven, but will also depend on how finely the ingredients have been chopped. It will also depend on the size and material of the container. This is why we recommend you keep a close eye on the baking process and be ready to adjust the cooking time, if necessary.

Avoid opening the oven door while your dish is cooking.

2 Put the salt, flour, sugar, butter, egg and yeast liquid in the main bowl fitted with the dough blade.
3 Process for 30 seconds.
4 Transfer the dough to a floured mixing bowl using the spatula. Cover with cling film or a damp cloth. Leave to rest for 30 minutes.

6 Divide into 6 equal pieces using a sharp knife A. Shape the dough into smoothtopped buns so that they have a uniform appearance after baking B.
7 Place on a baking tray lined with baking parchment, cover with a damp cloth and leave to prove for 30 mins.
8 Preheat the oven to 220°C (gas mark 7).
9 Brush the buns with the egg-and-milk mixture C.

TO MAKE THE BURGERS AND GARNISH

4 Shape the burgers with your hands. Fry them in a frying pan with a little olive oil for about 2 minutes on each side.
5 Top each burger with a cheese slice. Cover the frying pan until it is time to serve.
6 Make the mayonnaise according to the recipe on p.28, halving the amounts.
7 Split the buns, fill with tomato, lettuce, beef patty, mayonnaise and ketchup.
8 Eat while they are hot.

B

**Bain marie**

This gentle cooking technique can be used either on the hob (e.g. for making sauces or melting butter or chocolate) or in the oven (e.g. for baking puddings or custard). It involves placing a heatproof container with the food you want to cook inside a larger one partly filled with water kept at simmering point.

**Blind baking**

A pastry case is baked before adding a moist filling in order to prevent the base from becoming soggy.

C

**Caul fat**

A lacy, fatty membrane that surrounds the intestines of pigs, cows and sheep. Available from traditional butchers, it is wrapped around faggots, patés, crêpinettes and even some meat roasts before cooking to keep them moist and basted.

J

**Juliennes**

Fruit or vegetables cut into thin sticks. A julienne disc is available for your Magimix food processor.

K

**Knocking back**

In breadmaking, punching all the gas and air pockets out of risen dough to give it a more even texture.

P

**Piping bag**

A triangular or cone-shaped cloth, plastic or paper bag that can be fitted with a variety of nozzles. It is used for decorating cakes, filling pastries, forming meringues or sponge fingers, shaping duchess potatoes, etc.

**Proving**

In breadmaking, the dough is left to rise twice. The second time gives the yeast a chance to “prove” that it is still alive and improves the texture of the bread.

R

**Reduction**

A liquid (e.g. syrup, stock or sauce) is simmered over a moderate heat, causing some of the water to evaporate, in order to thicken it and/or concentrate the flavour.

**Rice flour**

Widely available in supermarkets, this gluten-free flour is useful for thickening stews and sauces.

**Roux**

Used to thicken soups, sauces and gravies, a roux is a mixture of equal parts of flour and fat (often butter) cooked over a low heat.

S

**Sandal tin**

Not for holding your packed lunch, but a round, straight-sided cake tin, ideal for making Victoria sponges.

**Steam**

It is crucial when you want to make a crusty loaf of bread, ensuring the outer dough layer remains flexible and moist.

Y

**Yeast**

In this recipe book, we recommend using fresh yeast, which can be found in some supermarket bakeries. Fresh yeast will only keep for a few days in the fridge, but you can freeze it in small batches. Dried yeast is widely available and keeps for up to six months. If you are using dried yeast, halve the quantities shown for fresh yeast.
